

Statistical bulletin

Construction output in Great Britain: June 2025, new orders and Construction Output Price Indices, April to June 2025

Short-term measures of output by the construction industry in June 2025, contracts awarded for new construction work in Great Britain, and a summary of the Construction Output Price Indices (OPIs) in the UK for Quarter 2 (Apr to June) 2025.

1 . Main points

- Total construction output is estimated to have grown by 1.2% in Quarter 2 (Apr to June) 2025 compared with Quarter 1 (Jan to Mar) 2025; new work increased by 1.1%, and repair and maintenance grew by 1.4%.
- Monthly construction output is estimated to have grown by 0.3% in June 2025; this follows a fall of 0.5% in May 2025 and an increase of 0.9% in April 2025.
- The increase in monthly output in June 2025 came solely from an increase in repair and maintenance (1.2%), as new work decreased by 0.4%.
- At the sector level, five out of the nine sectors grew in June 2025; the main contributors to the monthly increase were private housing repair and maintenance and non-housing repair and maintenance, which grew by 3.7% and 0.8%, respectively.
- Total construction new orders fell by 8.3% (£976 million) in Quarter 2 2025 compared with Quarter 1 2025; this quarterly decrease came mainly from infrastructure new work and private commercial new work.

2 . Data on construction in Great Britain

[Output in the construction industry](#)

Dataset | Released 14 August 2025

Monthly construction output for Great Britain at current price and chained volume measures, seasonally adjusted by public and private sector. Quality measures, including response rates.

[Output in the construction industry: subnational and subsector](#)

Dataset | Released 14 August 2025

Quarterly non-seasonally adjusted type of work and regional data at current prices, Great Britain.

[Construction output price indices](#)

Dataset | Released 14 August 2025

A summary of the Construction Output Price Indices (OPIs) from January 2014 to June 2025, UK.

[New orders in the construction industry](#)

Dataset | Released 14 August 2025

Quarterly new orders at current price and chained volume measures, seasonally adjusted by public and private sector. Quarterly non-seasonally adjusted type of work and regional data.

[Construction statistics annual tables](#)

Dataset | Released 22 November 2024

The construction industry in Great Britain, including value of output and type of work, new orders by sector, number of firms and total employment.

[Output in the Construction Industry – Customise my data](#)

Dataset | Released 14 August 2025

Customise My Data (CMD) is our new way of providing filterable, explorable data suitable to individual user needs.

3 . Glossary

Construction output estimates

Construction output estimates are monthly estimates of the amount of output chargeable to customers for building and civil engineering work done in the relevant period, excluding Value Added Tax (VAT) and payments to subcontractors.

Seasonally adjusted estimates

Seasonally adjusted estimates are derived by estimating and removing calendar effects (for example, leap years such as 2024) and seasonal effects (for example, decreased activity at Christmas because of site shutdowns) from the non-seasonally adjusted estimates.

Value estimates

The value estimates reflect the total value of work that businesses have completed over a reference month.

Volume estimates

The volume estimates are calculated by taking the value estimates and adjusting to remove the impact of price changes.

4 . Data sources and quality

Quality and methodology

More quality and methodology information (QMI) is available in:

- our [Construction output QMI](#)
- our [Construction output price indices \(OPIs\) QMI](#)
- our [New orders in construction QMI](#)

Reasons for revisions to construction output in this release

This release contains revisions to construction output estimates from April 2025 onwards, and is consistent with the [National Accounts Revisions Policy](#).

For further information on the revisions profile, see our [Output in the construction industry revisions triangle \(one-month growth\) dataset](#) and our [Output in the construction industry revisions triangle \(three-month growth\) dataset](#).

Pausing of Producer Prices publications

Business prices data with corrected chain linking methods have been used in the monthly GDP dataset for Producer Price Indices (PPI), import prices indices (IPI), and export price indices (EPI) from January 2025 onwards.

Correctly chain linked Service Producer Price Indices (SPPI) have been included in our monthly GDP dataset from April 2025 onwards.

In addition, the construction output price indices (OPI) calculated using the corrected PPI and SPPI data have been used from April 2025 onwards in this release, and in our monthly GDP dataset. We have published the OPI dataset on 14 August 2025, as well as the tables included in our accompanying datasets associated with this release.

The full implementation of updated business prices data will be managed in line with the national accounts revision policy. The full time series update will be included in our GDP quarterly national accounts, UK: April to June 2025 release on 30 September 2025, and in our Blue Book 2025 release.

Further information on the chain linking error in the producer prices dataset detailed in our methods update for our [Growth rates of selected output and input Producer Price Indices and Service Producer Prices Indices](#) published on 10 July 2025.

Seasonal adjustment

Our monthly construction estimates are seasonally adjusted. Seasonal adjustment is the process of removing the variations associated with the time of year, or the arrangement of the calendar, from a data time series.

Construction estimates, as for many data time series, are difficult to analyse using raw data because seasonal effects dominate short-term movements. Identifying and removing the seasonal component leaves the trend and irregular components.

The Office for National Statistics (ONS) uses the X-13-ARIMA-SEATS approach to seasonal adjustment. Seasonal adjustment parameters are monitored closely and regularly reviewed. For more information, please see our [seasonal adjustment methodology page](#).

In our monthly estimates, seasonal adjustment is applied at the sector level and the seasonally adjusted series are aggregated to create estimates by total output. As part of our quality assurance approach, residual seasonality checks are regularly completed by our time series analysis team on both the directly seasonally adjusted series and the indirectly derived aggregate time series.

Subnational and subsector construction output

Data on new orders supplied by Barbour ABI are used to model the breakdown of the overall output figures for Great Britain into the lower level and regional data. This is shown in Tables 1 and 2 of our [Output in the construction Industry: subnational and subsector dataset](#). More detail is available in our [Quality assurance of administrative data used in construction statistics methodology](#).

Bias adjustment

Typically, since the move to monthly gross domestic product (GDP) estimates, an adjustment to address any bias in survey responses for construction output is applied to the early construction output monthly estimates. We show this in our [Improvements to construction statistics: Addressing the bias in early estimates of construction output, June 2018 article](#).

Response rates for June 2025 showed improvement compared with levels in recent years since the coronavirus (COVID-19) pandemic. The survey turnover response rate for June 2025 was 77.8%. This follows a response rate of 76.5% in May and 71.6% in April. We have continued not to apply a bias adjustment since May 2020 while we review this approach. More information on our response rates is available in our [Output in the construction industry dataset](#).

Differences with Monthly GDP construction estimates

In Blue Book 2021, we introduced a new framework to improve how we produce volume estimates of GDP for balanced years as part of the supply use process. This was explained in our [Producing an alternative approach to GDP using experimental double deflation estimates article](#). This framework included the implementation of double-deflated industry-level gross value added (GVA) for the first time. This improvement was reflected in the [GDP quarterly national accounts, UK: April to June 2021 bulletin and dataset](#) and [GDP monthly estimate, UK: August 2021 bulletin](#) for the first time.

As a result, volume estimates in the monthly GDP and construction outputs releases will differ for the period 1997 to 2020. This is because the construction publication measures the volume of construction work (output), while the GDP series measures GVA (that is, output minus intermediate consumption). Construction estimates will align, but on a growth basis from January 2021 onwards.

Information and indicative effects of this change to industry-level GVA volume can be found in our [Impact of double deflation on industry chain volume measure annual estimates article](#) and our [Impact of Blue Book 2021 changes on quarterly volume estimates of gross domestic product by industry article](#).

Accredited official statistics

These accredited official statistics were independently reviewed by the Office for Statistics Regulation in March 2019. They comply with the standards of trustworthiness, quality and value in [the Code of Practice for Statistics](#) and should be labelled "accredited official statistics".

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

2A.Q CONSTRUCTION OUTPUT: VOLUME SEASONALLY ADJUSTED BY SECTOR

£ million

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

3A.A CONSTRUCTION OUTPUT: VOLUME SEASONALLY ADJUSTED PERCENTAGE CHANGE ON SAME PERIOD A YEAR EARLIER

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.

Users of these data should note that there may be instances where the period on period growths for the same component differ between tables. This is due to the growth rates being calculated at a higher precision than 1 dp within the production system. This accuracy is truncated when transferred into the published tables.
